Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-14 are drawn to a process of making a lamellar structure by blending polyolefin and compatibilizer together that is extruded to form a film tube which is stretched with predetermined thickness, classified in class 428, subclass 98.
 - II. Claims 15-17 are drawn to a personal article worn by a user having a compatibilizer that allows a barrier material to dispersed into a continuous polyolefin phase that is formed into a body worn device, classified in class 2, subclass 69.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case invention I pertains to a lamellar structure by blending polyolefin and compatibilizer together that is extruded to form a film tube which is stretched with predetermined thickness, classified in class 428, subclass 98 that is substantially different from invention II having a personal article worn by a user having a compatibilizer that allows a barrier material to dispersed into a continuous polyolefin phase that is formed into a body worn device, classified in class 2,

subclass 69 since invention II can be made by different conventional process method as die stamping, blow molding, etc as known in the art to form the body worn device.
